**Study: Excess Opioid Disposal Following Orthopedic Foot and Ankle Surgery
NCT03285061**

Statistical Analysis Plan

We aim to enroll at least 35 patients in each group assuming a follow-up rate to study completion of approximately 60%. Treatment groups are to be compared using a Chi-Square Test of Independence. P-values less than 0.05 are to be considered statistically significant. All statistical analyses are to be conducted using R and Microsoft Excel (R Project, Microsoft Corporation).
